

GUIDING PATIENTS THROUGH THEIR IMMUNOTHERAPY EXPERIENCE CAN BE DIFFICULT: LIGHTHOUSE CAN HELP

While on treatment with an AstraZeneca immunotherapy, patients can experience immune-mediated adverse events (imAEs), which, if left untreated, could be harmful, or possibly fatal. With the help of Lighthouse, your patients will have 24/7 support for monitoring symptoms of imAEs.

SUPPORTING PATIENTS ON ASTRAZENECA IMMUNOTHERAPY

Lighthouse provides constant support to your patients through medically trained Lighthouse Advocates. Our goal is to make your patients' treatment experience as comfortable as possible with minimal additional effort from you or your practice. Lighthouse supports your patients during any imAEs they may encounter during their treatment, 24 hours a day, 7 days a week.

LIGHTHOUSE CAN

Encourage patients to track, monitor, and report imAEs

Bridge communication between you and your patients

Enable you and your practice to be informed with minimal additional work

THE ADVOCATES

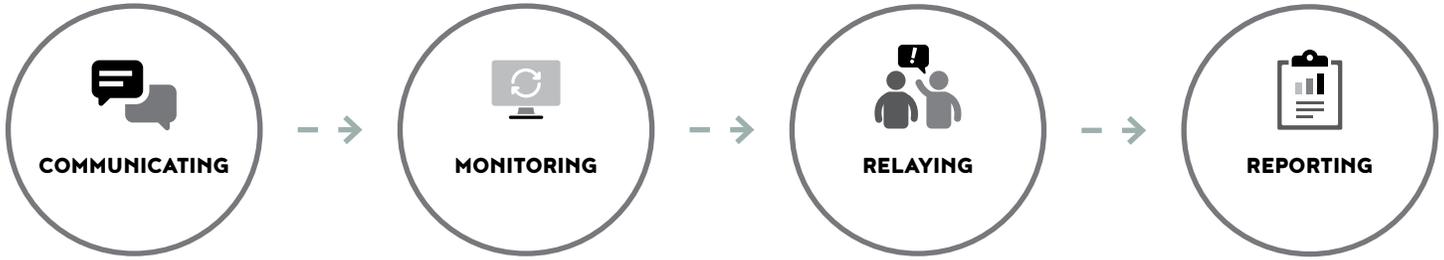

Supporting patients who have imAEs requires ongoing communication, and we know at times this can be challenging for you and your practice.

Lighthouse Advocates are dedicated, **medically trained** professionals and are available **24/7**. They keep in touch with patients and are responsible for helping them regularly track and report any symptoms of imAEs.

ENCOURAGE PATIENTS TO TRACK SYMPTOMS OF imAEs

When your patients start treatment with an AstraZeneca immunotherapy, they may expect the symptoms of imAEs to be similar to their previous treatments. However, the timing and types of symptoms may be quite different. Encourage your patients to work with their assigned Lighthouse Advocate to make their treatment experience as comfortable as possible.

THE EXPERIENCE

When your patient enrolls in Lighthouse, he or she is assigned an Advocate. The Advocate will be in contact with your patient on a regular basis to help track symptoms of imAEs.

When your patient reports a symptom of an imAE to his or her Advocate, the Advocate will log the information received, review it, and, if necessary, note for immediate follow-up.

The Advocate notes for immediate follow-up of any symptoms that could signal a serious imAE. In this case, the Advocate will direct the patient to you so you can take appropriate action.

Advocates will keep records of reported symptoms and provide summary reports to your patients at their request. These records can also be made available to you and your practice by requesting them from your patient.

YOUR ROLE

The goal of Lighthouse is to support your patients on a regular basis. Your role is to encourage your patients to sign up to receive patient education and additional support through Lighthouse.

With the support of Lighthouse, your patients will regularly track symptoms of their imAEs and contact you if they experience any that are serious.

MORE SUPPORT

Lighthouse support for you and your patients includes the Advocate service, as well as:

SYMPTOM MONITORING BROCHURE

Educates patients on the types of imAEs they may experience on immunotherapy

PATIENT SYMPTOM TRACKER

Encourages patients to log symptoms to better track and report any imAEs

PATIENT WALLET CARD

Contains patient and oncologist contact information in case of emergencies
